How I Created the Knowledge Base:

　　　　I used constructed a simple dictionary in Python full of questions and answers related to the top words that I personally deemed as the most important based on my domain knowledge of the document. These words were: muzan, mustang, musuko, mutant, mundo, murderer, musicnippon, muzukashii, novelgrisaia, and murabito. The dictionaty was then converted into a pickle file to be used later to develop a chat bot.

Sample Dialog:

　　　　Below is a sample dialog based on the knowledge base:

```
'Who is the main villain in kimestsu no yaiba?': 'muzan',
   'What was the flame alchemists name in FMAB?': 'mustang',
   'What is daughter in Japanese?': 'musuko',
   'What did one for all call people with quirks?': 'mutant',
   'Arancars lived in hueco': 'mundo',
   'What was Johan Liebert being chsed for being?': 'murderer',
   'Who made the ending song of Joshiraku?': 'musicnippon',
   'What is difficult in Japanese?': 'muzukashii',
   'What is the anime about the guy who groes up as a secret soldier
and joins a school with 5 mysterious girls?': 'novelgrisaia',
   'What is villager in Japanese?': 'murabito'
```
